

National Procurement Data Security Policy 2026

1. Scope and Application

This policy applies to all vendors supplying cloud software and data hosting services to federal agencies. Any software processing citizen data must adhere to strict encryption and location requirements.

2. Security Requirements

2.1 Data Encryption

All citizen data must be encrypted at rest using AES-256 or higher. Data in transit must use TLS 1.3.

2.2 Data Residency

Under no circumstances may citizen data be stored outside of the national borders. All physical servers handling this data must be geographically located within the country.

3. Compliance and Auditing

Vendors must undergo a third-party security audit annually and submit the compliance certificate (SOC 2 Type II or equivalent) to the procurement office.
