

Tender Proposal: SecureCloud Hosting Solution

Prepared by: Acme Cloud Solutions
Date: August 2026

1. Technical Architecture

Our SecureCloud solution provides state-of-the-art hosting. We utilize AES-256 encryption for all databases at rest. For data in transit, we enforce TLS 1.3 across all endpoints, ensuring complete alignment with national data security standards.

2. Infrastructure Details

To ensure high availability and disaster recovery, we utilize a multi-region deployment strategy. Our primary datacenters are located within the national borders, while our backup nodes are distributed across our global network in North America and Europe to guarantee 99.99% uptime.

3. Certifications

Acme Cloud Solutions takes security seriously. We hold ISO 9001 certification for quality management and conduct internal security reviews every six months.
